WHAT'S IN THIS ISSUE

Plan Ahead Before Disaster Strikes!

PROTECT YOUR FACILITIES AND EQUIPMENT DURING RAINY DAYS!

It's typhoon season for the Asia-Pacific region. Is your business protected from heavy or excessive rainfall?

To prevent incidents, you need to make sure that your business is well-equipped to withstand natural catastrophes. Disaster preparedness is crucial during these times, especially now as we experience the continuous effects brought by climate change.

Formulate your own Disaster Prevention and Mitigation Plans to give your business firsthand solutions when the unforeseen strikes!

PREVENT DISASTERS WITH RELIEF SOLUTIONS

Here are 5 steps to consider ahead if you want to save your business.

1. Clean and Pre-treat Drainage

Clogged drains can result in heavy water accumulation that can flood your surroundings and cause water damage to equipment. Dredging, Disinfection, and Biological Treatment will remove the build-up of organic waste, scale, and mud clogs. The use of **Drain and Cleaning Products** helps to slow down flood and future blockages while returning drains to its full capacity.

2. Equipment Preparation

Apart from securing power supply lines, motors, and equipment circuit boards, one of the major issues of flooding is water damage. Preventive maintenance such as insulation recovery work saves you from short circuits and electric shocks that can cause fatal accidents. Store **Electrical and Corrosion Control** products that keep your equipment and people safe from major accidents.

3. Emergency Solutions

Be prepared to repair! Keep emergency solutions on hand. Choose the one that is ideal for extreme temperature, has good water resistant attributes, and shortens curing time.

4. Air-conditioning System

Regular maintenance of air-conditioning units keeps their performance efficient. During regular check-ups, cleaning, disinfection, and sterilization, it is best to use **Specialty Maintenance** products to help prolong the life of your air-conditioning system.

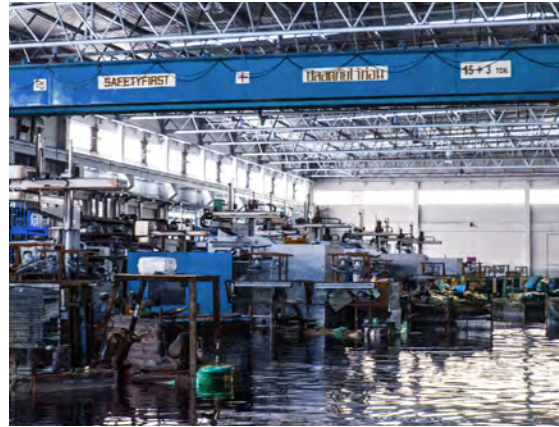

5. Water Treatment Equipment

Transmission of pathogens could happen if your cooling tower is neglected. Regular monitoring and maintenance helps prevent the potential build-up and spread of pathogens through the water system of the facility.

Find out why NCH is the BEST SOLUTION YOU NEED!

NCH helps you protect your business with Bacteria & Disease Control, Cleaning & Restoration, Rust & Corrosion prevention, Vehicle Conditioning, HVAC Disinfection, Emergency Repair, and Water Treatment solutions.
